

About Exolayer

We are a Bengaluru-based prototyping product development consultancy. We assist to help the startups demo graph by bridging the gap between digital design and market-ready physical products protecting their intellectual property.

- **Industrial Design**
Transforming raw ideas into powerful, user-centric product concepts through required strategy.
- **3D CAD Engineering**
Translating aesthetic with DFM 3D models ready for production.
- **Rapid Prototyping**
FDM 3D printing and in-house manufacturing to create prototype models & molds
- **Product Development & User Experience**
Providing User journey from initial sketch to minimum viable product (MVP)

The Indian Market Opportunity

EV Revolution

India is aggressively shifting toward electric mobility, with major OEMs seeking advanced lightweighting solutions to extend range and efficiency.

Sustainability Mandate

With national "Net Zero" targets, there is immense regulatory and consumer pressure to replace petrochemical plastics with bio-based, circular alternatives.

Make in India

The government's push for local manufacturing capability creates a prime environment for producing sustainable composite parts domestically.

Material Competitive Analysis

Feature / Axis	Bcomp AmpliTex™ (Flax)	Carbon Fiber (CF)	Glass Fiber (GF)	Indian Jute / Coir
Primary Market	High-perf. Sustainability (Europe)	Aerospace / Luxury Auto	General Industrial / Marine	Low-cost commodity / Packaging
Specific Stiffness	High (Good for light structures)	Very High (Best structural rigidity)	Medium (Heavy for its stiffness)	Low-Medium (Not for structural loads)
Vibration Damping	Excellent (Absorbs road noise)	Poor (Transmits noise/vibration)	Moderate	Good (But inconsistent quality)
Crash Behavior	Safe (Yields, no sharp shards)	Dangerous (Shatters into shards)	Moderate (Cracks)	Safe (Tears/Yields)
Cost	Medium-High (Premium pricing)	Very High (Expensive)	Low (Cheap standard)	Very Low (Locally abundant)
Aesthetics	Premium (Organic "Carbon" look)	Tech/Industrial	Plain/Opaque (Needs painting)	Rough/Rustic (Hairy finish)
Sustainability	High (CO2 neutral, renewable)	Very Low (Energy intensive)	Low (Hard to recycle)	High (Biodegradable)
India Availability	Niche/Import Only	Import/Limited Mfg	Widely Available	Native / Abundant

Market Positioning

Sustainable Alternative:

Primarily marketed to industries looking to decarbonize and reduce their environmental footprint without sacrificing significant performance. It serves as a direct substitute or complement to carbon and glass fibers.

Bridging the Gap:

The "sweet spot" between heavy, lower-performance standard plastics/fiberglass and expensive, high-carbon-footprint carbon fiber. Offering significant weight savings over standard materials while being more eco-friendly than carbon fiber

Typical Applications

- Motorsports:** Bodywork and interior panels (e.g., racing seats, bumpers, fenders, hoods etc) for weight reduction and safety.
- Automotive:** Interior trim and structural parts to lower the vehicle's CO2 footprint.
- Sports:** Skis, Skateboards, snowboards, and surfboards (for damping and pop).
- Marine & Lifestyle:** Boat hulls, furniture, and consumer electronics where weight and aesthetics matter.
- Musical instruments:** String Instruments & Percussion

Partnership Material & Manufacturing

Authorized Distribution Channel

Indian innovators currently face significant barriers in accessing high-performance European flax composites.

We aim to close this gap by pursuing a formal partnership to serve as Bcomp's authorized supplier and distributor for the Indian market, ensuring reliable availability and streamlined adoption of their advanced materials while protecting the Intellectual property.

Our Approach:

- Streamline logistics and import processes for local clients.
- Stock inventory for rapid deployment to startups and prototyping labs.
- Provide technical support and material selection guidance to new adopters.
- Understand and adapt to India's cost sensitive market temperature

Strategic Benefits:

- Cost benefits:** Expansion into geography without heavy upfront investment or local infrastructure and limited capex
- IP-safe partnership** with respect for their proprietary technology & quality standards.
- Low-Volume Pilot & Proof of concept :** Small scale Validation in local conditions,regulation, cost and supply
- Go to Market Strategy :** Outsourcing operational load where we drive business development, find leads, handle negotiations, oversee compliance.
- Scalability :** Offer Indian OEMs a "drop-in" solution for mass production.
- Expertise:** Leverage our engineering team for DFMA (Design for Manufacturing & assembly) optimization and Regulatory, homologation /certification standards.
- Risk Identifiers** for the Pilot programs, IP leakage, import duties, replicability of Bcomp standards & adoption metrics.

Road-map
